

SE IT Sem III CBCS

(3 Hours)

[Total Marks: 80]

- N.B.: (1) Question No. 1 is compulsory.
 (2) Solve any three questions out of remaining five.
 (3) Figures to right indicate full marks.
 (4) Assume suitable data where necessary.

- Q1 Solve any four (20)
- What are the important features of differential amplifier, also states its types.
 - State De'sMorgan theorem & implement OR gate using NAND gate only.
 - ADD $(83)_{10}$ & $(34)_{10}$ in BCD.
 - Convert S-R flip flop to D flip-flop.
 - State advantages & disadvantages of multiplexer.
 - Explain VHDL format in brief.
- Q2. A) Simplify the following using Quine-Mcclusky method
 $F(A,B,C,D) = \sum m(0,3,4,11,15) + d(1,2,5)$ (10)
- B) Design & implement one digit BCD adder using IC 7483 (10)
- Q3. A) Design MOD- 11 ripple counter using suitable flip-flop. (7)
- B) Convert the following decimal number into binary, octal & hexadecimal
 i) $(555)_{10}$ ii) $(138)_{10}$ iii) $(79)_{10}$ (9)
- C) Why transistor biasing is required, state factors required for it (4)
- Q4 A) Draw truth table of full subtractor & realize using 3-8 decoder (10)
- B) Draw the circuit diagram of voltage divider bias circuit using CE configuration
 And explain how it stabilizes the operating point (10)
- Q5. a) $Y = ABC + BC'D + A'BC$ & realize using gates (6)
- a) Explain parallel I/P serial output shift register (6)
- b) Minimize the following expression using only one 8:1 MUX.
 $F(A,B,C,D) = \sum m(1,2,9,10,11,14,15)$ (8)
- Q6. Write short notes on any four (20)
- BCD & excess-3 codes
 - Current mirror circuit
 - Ring counter
 - ALU
 - Modelling styles in VHDL
